

Please do not allow cell phone usage on airborne aircraft. There is no hard evidence that cell phone usage does not interfere with aircraft electronics/communications. Cell phone usage would allow terrorists or would be hijackers to freely communicate with each other and suspicious activity could not be observed. Passengers have a difficult time hearing and paying attention to crew member instructions the way things are now, cell phone usage will add another element of distraction and noise. Trying to get passengers to end cell phone conversations now, in order to have them listen to the safety demo, is challenging. Cell phone usage on an airborne aircraft will present another set of safety issues. Please help to keep us safe.
